
Effect of the aspiration learning rate ρ beyond weak selection
(a) Donation game
$R=1,\ S=-1,\ T=2,\ P=0$
(b) Snowdrift game
$R=3,\ S=2,\ T=4,\ P=0$
(c) Stag-hunt game
$R=3,\ S=-1,\ T=0,\ P=0$
(d) Harmony game
$R=3,\ S=2,\ T=1,\ P=0$
Stationary mean $\mathbb{E}_\beta[p_C]$
Scaled variance $N\mathrm{Var}_\beta(p_C)$
Selection intensity β
$\rho=0.1$
$\rho=0.5$
$\rho=1$
