
Scaled stationary variance under averaged and accumulated payoffs
(a) Donation game
$R=1,\ S=-1,\ T=2,\ P=0$
(b) Snowdrift game
$R=3,\ S=2,\ T=4,\ P=0$
(c) Stag-hunt game
$R=3,\ S=-1,\ T=0,\ P=0$
(d) Harmony game
$R=3,\ S=2,\ T=1,\ P=0$
Averaged payoffs
Scaled variance $N\mathrm{Var}_\beta(p_C)$
Accumulated payoffs
Scaled variance $N\mathrm{Var}_\beta(p_C)$
Selection intensity β
Random 4-regular
Erdős–Rényi
Barabási–Albert
